

PHP & MySQL Viva Preparation Guide

1. What is PHP?

PHP is a server-side scripting language used to create dynamic websites and web applications.

Important Viva Questions:

PHP Full Form: Hypertext Preprocessor

PHP is used for backend development.

Used to create dynamic websites, handle forms, manage login systems, and connect databases.

2. What is MySQL?

MySQL is a database management system used to store data.

3. What is XAMPP?

X = Cross Platform

A = Apache

M = MySQL

P = PHP

P = Perl

4. What is localhost?

localhost means your own computer server.

5. PHP File Extension

PHP files use the .php extension.

6. Basic PHP Code

```
<?php echo "Hello"; ?>
```

7. Variables in PHP

Variables are used to store data and always start with \$ symbol.

8. Data Types

String

Integer

Float

Boolean

9. Forms in PHP

Forms are used to take user input.

GETData visible in URL

POSTSecure method

10. Session

Session stores user data on the server temporarily.

11. Cookie

Cookie stores small data in browser.

12. Arrays

Arrays store multiple values in one variable.

13. Sorting Arrays

sort() = Ascending order

rsort() = Descending order

14. File Handling

fopen() = Open file

fwrite() = Write file

fread() = Read file

fclose() = Close file

15. Login System

Used for user authentication.

16. MySQL Connection

`mysqli_connect()` is used to connect PHP with MySQL database.

17. CRUD Operations

Create

Read

Update

Delete

18. Insert Data

`INSERT INTO` is used to insert data into database.

19. Display Records

`SELECT * FROM table_name;`

20. Update Records

`UPDATE table_name SET column=value WHERE id=1;`

21. Delete Records

`DELETE FROM table_name WHERE id=1;`

22. Image Upload

`move_uploaded_file()` is used to upload files.

23. JavaScript

JavaScript is used to make webpages interactive.

24. Pattern Programs

Nested loops are commonly used in pattern programs.

25. HTML Basics

HTML = HyperText Markup Language

Form tag is used to create forms.

Input tag is used to take user input.

26. Database Questions

Database = Collection of organized data

Table = Collection of rows and columns

Primary Key = Unique identifier

27. Most Important Viva Questions

What is PHP?

Difference between GET and POST?

What is Session?

What is Cookie?

What is CRUD?

What is Primary Key?

28. Super Short Answers

Echo = Print output

Array = Store multiple values

POST = Secure method

CRUD = Create Read Update Delete

29. Security Questions

Password field hides password.

Validation checks correct input.

30. Final Viva Tips

Understand basic concepts, full forms, and purpose of code. Explain code line by line simply.
